PROFESSIONAL SUMMARY

Back-End Software Engineer with 10+ years of experience building and scaling distributed systems in finance and retail. Specialized in .NET, microservices, and cloud architectures, with a proven track record of improving performance, reliability, and deployment efficiency in remote, cross-functional teams. Experienced in leveraging AI coding agents to accelerate development, streamline debugging, and strengthen code review practices.

PROFESSIONAL EXPERIENCE

Bonzzu Inc. — Remote

Senior Software Engineer (Back-End) | Sep 2021 – Present

Key Responsibilities:

- Designed and developed 10+ scalable microservices using .NET Framework/Core, supporting inventory forecasting systems processing millions of records daily.
- Built and optimized RESTful APIs, reducing average response time by 25–35% through improved error handling, caching, and versioning strategies.
- Implemented CI/CD pipelines (Jenkins, GitHub Actions), decreasing deployment time by 40% and enabling multiple weekly releases.
- Enforced code quality practices (SonarQube, unit testing), reducing production defects by 30% and improving maintainability.
- Integrated AI coding agents (Claude, GitHub Copilot, OpenAI Codex) into daily development workflows, reducing turnaround time on standard tasks by up to 75% (cutting typical 2–3 day tasks to half a day to 1 day) and accelerating new API scaffolding from multiple days to 1–2 days, while driving broader team adoption of AI-assisted development practices.
- Applied AI agents to support debugging, root-cause analysis, and code review — speeding up diagnosis of intermittent production issues and flagging edge cases, null-reference risks, and inconsistent error handling before pull requests reached human reviewers, improving code quality and review turnaround.

Key Achievements:

- Standardized CI/CD workflows across services, increasing deployment success rate to >95%.
- Contributed to high-volume backend systems supporting a global retail client, enabling scalable inventory processing and decision-making.
- Reduced time-to-resolution on recurring backend issues by pairing traditional debugging with AI-agent-assisted root-cause analysis.

Sigcomt S.A.C. — Lima, Peru

Back-End Software Engineer | Apr 2019 – Jun 2021

Key Responsibilities:

- Developed microservices in .NET and Java for financial transaction systems handling high-volume digital credit operations.
- Implemented asynchronous processing and integrations (JBoss Fuse), improving system throughput by 30% and reducing latency in transaction flows.
- Centralized business rules using JBoss BRMS, reducing manual intervention and accelerating credit approval processes by 20–25%.
- Participated in system design, improving system resilience and reducing service downtime through fault-tolerant patterns.

Key Achievements:

- Delivered backend services powering digital credit and mobile wallet platforms used in production.
- Eliminated operational bottlenecks by automating decision logic, improving processing efficiency and consistency.

Gestión y Sistemas S.A.C. — Lima, Peru

Software Engineer | May 2018 – Apr 2019

- Developed backend APIs and web applications using .NET Core and SQL Server, supporting business operations with improved data accessibility and performance.
- Optimized SQL queries and stored procedures, reducing reporting execution time by 30–40%.
- Built Power BI dashboards that enabled stakeholders to make faster, data-driven decisions, reducing reporting turnaround time from days to hours.

Universidad César Vallejo — Trujillo, Peru

Software Engineer | Mar 2016 – Apr 2018

- Maintained and enhanced HR and finance systems, improving system reliability and reducing support incidents by 20%.
- Developed reporting tools that streamlined administrative workflows, saving dozens of manual hours per month.
- Collaborated with stakeholders to implement system improvements aligned with operational needs.

EARLIER EXPERIENCE

Delivered multiple enterprise and financial system solutions across the following roles:

Indra — Software Engineer (2015 – 2016)

Inexo S.A.C. — Software Engineer (2013 – 2015)

Caja Municipal de Ica — IT Assistant (2012 – 2013)

COM S.A. — Programmer Analyst (2009 – 2011)

Cisesa Comunicaciones — Analyst Developer (2006 – 2008)

EDUCATION

B.S. in Systems Engineering — Universidad César Vallejo, Peru (2003)

TECHNICAL SKILLS

Programming Languages: C#, Java, SQL, Python, JavaScript

Backend Frameworks & APIs: .NET Framework, .NET Core, ASP.NET Web API, RESTful API, Swagger/OpenAPI

Architecture & Systems Design: Microservices, Distributed Systems, Service Integration, Asynchronous Processing

Databases & Data Stores: SQL Server, MySQL, MongoDB, SQLite

Cloud & DevOps: Docker, Kubernetes, CI/CD Pipelines (Jenkins, GitHub Actions, ArgoCD), Azure, AWS

Observability & Reliability: Centralized Logging, Application Monitoring, Performance Metrics

Quality & Testing: Unit Testing, Code Reviews, Static Code Analysis (SonarQube)

AI-Assisted Development: Code review, Code generation, AI Coding Agents, Claude, GitHub Copilot, OpenAI Codex

Version Control & Collaboration: Git, GitHub, Jira, Confluence

Frontend (Supporting): Angular, TypeScript, JavaScript

ADDITIONAL INFORMATION

Languages: English (Intermediate – professional working proficiency), Spanish (Native)

Methodologies: Agile / Scrum

Availability: Full-time remote
